## **THINKING ABOUT DESIGN-2**

It is product which is used during summers i.e Blue Star A.C remote. My A.C remote is really irritating due to its bad design.

As you see in the picture my A.C remote has a red color on/off switch and the temperature control white in color. But they are same size and during night time when the lights are turned off we cant really distinguish between them and regularly by mistakenly when we want to change the temperature we turn off the A.C or change the fan speed or change the mode.

The green color oval in the picture depicts it.

The product could be better if they could place the on/off button on the top of the remote just like in most of the T.V remotes. It could atleast have light illuminating the on/off button or have shining florescent color to distinguish them in night or atleast change the shape of the ON/OFF button.
